What is a recommended device?

We regularly monitor device performance and recommend those that help deliver the fastest speeds, lowest latency, least packet loss and increased reliability on our Xfinity 10G Network. We refresh our recommendations quarterly based solely on the network performance data – they are not influenced by manufacturers.

We strongly encourage customers interested in owning their devices to purchase them new from reputable sources. New devices provide more reliability, including manufacturer support for performance and security related issues. These devices have proven to perform better on our network.

Full List of Compatible Devices

Below is a full list of compatible devices. However, we suggest using a device marked “recommended” to ensure the most reliable experience based on performance and compatibility with our Xfinity 10G Network.

Devices not shown on this list are either incompatible with the Xfinity 10G Network or no longer supported by the device manufacturer.
